

## Farm

A total of eight loads of milo have been transported to the Pennington Seed buying point in Madison. The total weight was about 2600 bushels which was 100 more than what we had estimated to be in the farm storage grain bin. The grain truck is now nearly loaded with soybeans that will be transported to Cargill in Gainesville. This load consists of samples that were released from soybean research storage and all remaining beans from the farm storage grain bin.

## Research

Please let us know of needs for research areas this coming crop year. This will assist us in knowing how to make plans for the cropping of non-research areas and in the placing of purchase orders for fertilize and chemicals for this coming crop year.

## Comments

The purchase order for the front-end loader for the JD 6420 was completed this month. This is a quick detach model that can be easily removed when the tractor is needed other farm duties. This tractor was purchased in 2005 with the loader control package included. We were able to use funds from fiscal year 2007 for the purchase of the actual loader. This tractor-loader combination is a welcome addition to the equipment inventory here at the PSF.
