

Graduate Assistantship Available: Turfgrass Weed Science

Date available	May 2011
Description	Graduate assistantship available at the University of Georgia. The student will conduct research on weed management in turfgrasses relevant to Georgia. Projects would include but not limited to the development, establishment, and maintenance of chemical (herbicides and plant growth regulators) and cultural weed management strategies. Research could also be conducted to characterize and describe fundamental processes causing and/or affecting weeds and turfgrass responses to environmental and technological inputs. The opportunity to translate research findings into extension information and presentation will also be provided.
Qualifications sought	B.S. in Plant Sciences, Agronomy, Botany, Horticulture, or a related field. Must have strong communication and organizational skills. Must be able to work independently.
